

Application: Application: Aplicación:

Infiniti FX35, FX45, G35 | Nissan Altima, Maxima, Murano, Sentra

Location of cabin filter:

Under the dash behind the glove compartment on the passenger side of the vehicle.

A caution or service label will be on the glove box door if vehicle is equipped with a cabin filter.

To remove existing filter:

1. Locate and remove the two glove compartment lower hinge pins (Fig. 2) by sliding outward from either side of the glove compartment. (Fig. 1) *See important note below.*
2. Open the glove compartment and lower it out of the way.
3. Locate the cabin filter access door and unsnap the door and remove, (Fig. 3,4)
4. Remove the dirty filter and replace with clean filter. (Fig. 5) (Please pay close attention to the air flow directional arrow when removing the dirty filter and installing the clean filter.)
5. Reverse steps 1 through 3 to complete installation.

Important note: On some models it may be necessary to remove the lower passenger panel and passenger side kick panel to remove the glove compartment. If this is the case:

- A. Remove the lower passenger panel by disconnecting the clips that secure it.
- B. Locate and remove the screw securing the passenger side kick panel to the floor and remove weather stripping on the kick panel. The kick panel can now be removed by pulling it away from the passenger door disconnecting the clips.
- C. For removal of the glove compartment in this case you will need to remove the 6 screws securing the glove compartment (4 at the top and 2 at the bottom).

Continue the installation with step 3 at the top.

Please use caution and do not disconnect the yellow airbag connector or allow the glove box lid to hang by the yellow airbag wiring harness.
